CAREER OBJECTIVE

Motivated Computer Science undergraduate with hands-on experience in Python, SQL, Power BI and Machine Learning, complemented by basic knowledge of Jenkins and Docker. Seeking a challenging role to apply skills, enhance automation and deployment processes, and achieve continuous professional growth.

INTERNSHIPS

Cloud Virtual Internship - Amazon Web Services

Tech Stack: AWS EC2, S3, Lambda, RDS, Glue, Redshift, CloudFormation, IAM

- Gained hands-on experience in AWS data engineering by building and managing scalable data pipelines using services like S3, Glue, and Redshift.
- Automated data workflows and infrastructure provisioning with CloudFormation, improving efficiency and reducing manual effort by 25%.
- Developed ETL processes with AWS Glue and Lambda, optimizing data processing performance and reducing latency.
- Implemented data security best practices using IAM policies, KMS encryption, and fine-grained access control to ensure compliance and data protection.

Data Engineering Intern – Virtual Internship

Tech Stack: ETL Pipelines, Data Warehousing, SQL, Automation, Security & Access Control

- Designed and maintained scalable data pipelines for data ingestion, transformation, and analytics.
- Developed ETL processes to clean, transform, and load structured data into analytical data stores, improving processing efficiency.
- Worked with data warehousing solutions to optimize data storage, querying, and reporting performance.
- Applied data engineering best practices such as pipeline optimization, fault tolerance, and performance tuning.

PROJECTS

Explainable AI for Battery State of Health Prediction using SHAP and LIME

Tech Stack: Python, TensorFlow, Matplotlib, CNN-LSTM , SHAP, LIME, Google Colab.

- Built and optimized a CNN-LSTM hybrid model achieving 92% prediction accuracy for battery SOH using time-series cycling data.
- Improved model generalization and reduced error rates through data normalization, sequence modeling, and hyperparameter tuning.
- Integrated SHAP (global interpretability) and LIME (local explanations) to visualize feature importance and decision reasoning.
- Developed interpretability dashboards in Matplotlib, enabling identification of critical degradation indicators in EV batteries.
- Enhanced transparency and reliability of AI-driven diagnostics for electric vehicle battery health management systems.

Sales Analysis & Reporting Dashboard using Power BI

Tech Stack: Power BI Desktop, Power Query, DAX .

- Designed and deployed an interactive Power BI dashboard to analyze sales, profit, and customer performance.
- Utilized Power Query for data cleaning and transformation, and applied DAX measures to calculate key KPIs (sales growth, profit margins, customer retention).
- Delivered actionable insights into top-performing products, regions, and customer segments, supporting data-driven strategic decisions.

EDUCATION

Bachelor of Technology, CSE (Data Science) — 2022-2026 | Guntur, India
R.V. R & J.C. College of Engineering — 8.12 CGPA

Jawahar Navodaya Vidyalaya, MPC — 2021-2022 | Maddhirala, India
Intermediate — Percentage: 71

Jawahar Navodaya Vidyalaya — 2019-2020 | Maddhirala, India
10th Standard — Percentage: 69

SKILLS

Programming Languages
Python, SQL

Course work
DBMS, Operating systems, Computer networks, Software Engineering

Tools
Power BI, Jenkins, Docker

Soft Skills
Leadership, Communication and Problem-Solving

Version Control
Git, GitHub

ACCOMPLISHMENTS

- Secured admission to Jawahar Navodaya Vidyalaya, a highly competitive and prestigious central government school in India, through a nationwide selection process.
- Participated in Hackathon, Uncalled innovators (2023).

EXTRA-CURRICULAR ACTIVITIES

College Sports Player | Basketball & Handball

- Represented RVR & JC College of Engineering in Basketball and Handball at intercollegiate tournaments under Acharya Nagarjuna University.
- Participated in multiple university-level competitions, demonstrating teamwork, discipline, and athletic commitment.
